

September 2, 2025

#### **Key points:**

- The Stoxx 600 remains in a Confirmed Uptrend, but cracks are starting to appear. Regional indexes have picked up distribution days, while overall market breadth has deteriorated sharply, with fewer breakouts and weaker T2121 (12 week new high/new low ratio) readings signaling growing fragility in the rally.
- Last week, all sectors closed negative. Transportation, Financial, and Retail led the decline, while Consumer Staple and Technology held up relatively better. Sector rotation remains mixed: Energy, Utility, and Transportation still show strength but are losing momentum, while Consumer Staples and Basic Materials have gained traction.
- European Financial, tracked by the iShares DJ Stoxx 600 Banks Index (EXV1.DE), remain the main risk. After a 41% year-to-date surge, the index broke below its 21-DMA on heavy volume, further pressured by political turmoil in France.
- Amid extreme sector divergence, we recommend trimming exposure to Financial and reallocating into defensive sectors to capture the likely rotation.
- Watchlist: (see to Sector Score Cards): Hill&Smith (HILS.GB), Imperial Tobacco (IMB.GB), Kering (KER.FR), and Telenor (TEL.NO).
- European Focus List update:
  - Actionable names include Argenx (ARGX.BE; ARGX:BB), UCB (UCB.BE; UCB:BB), and ABB (ABBN.CH; ABBN:SW).
  - Addition: Argenx (ARGX.BE; ARGX:BB).
  - Removal: None.

#### Markets Retreating from Recent Highs, Rising Distribution

- Europe's main index, the Stoxx 600, retreated from its 52-week high, its first weekly decline in the last four weeks: The Stoxx 600 declined ~2% last week, pulling back from its 52-week high. It broke below its 10- and 21-DMA and added two distribution days during the week. It remains in a Confirmed Uptrend, with support at its 50-DMA (-1%), followed by its 100-DMA (-2%).
- Most regional indices declined 2.0–3.7% last week, with Ireland (-3.7%) and Austria (-3.6%) declining the most. The U.K., Finland, Italy, and Belgium broke below their 10-DMA but continue to hold above their 21-DMA, pulling back 2–3% from their 52-week highs.
- Sweden also broke below its 10-DMA after pulling back from its recent highs.
- Norway continues to trade sideways, above all its key moving averages, and is 1% off highs.
- Austria, Portugal, and Spain broke below their 10- and 21-DMA and are trading 3–5% off highs.
- France broke below its 50-DMA and is testing support at the 200-DMA.
- Germany and Ireland broke below their 21- and 50-DMA. Next support is at the 100-DMA.
- Switzerland continues to trade in a tight area, slightly above the 200-DMA and 8% off highs.
- The Netherlands is back below its 50- and 200-DMA and is 6% off its 52-week high.
- Denmark is trading along its short-term moving averages and remained in a broader downtrend. It is 44% off highs.
- Last week, France was downgraded to a Downtrend, while Ireland, Austria, and Portugal were shifted to an Uptrend Under Pressure from a Confirmed Uptrend.
- Among the 16 indices we cover, eight markets are in a Confirmed Uptrend, three in a Rally Attempt, four in an Uptrend Under Pressure, and one in a Downtrend. The average distribution day count increased to 2.8 from 1.2 in the prior week.

#### Sector Rotation is Mixed, Slightly Favoring Defensive Sectors

- Last week, all sectors closed negative. Transportation (-3.7%) and Financial (-3.4%) lagged the most, followed by Retail (-2.7%) and Utility (-2.8%). Consumer Staple and Technology declined ~0.8% yet held up better. The remaining sectors declined 1–2%. On our rotation graph, Energy, Utility, and Transportation exhibited weakening short-term momentum but remained in the best quadrant. Financial paused after showing strength in momentum for the last few weeks. Momentum in Capital Equipment continued to weaken as the sector moved out from the best quadrant.
- Consumer Staple and Basic Material showed positive momentum last week, while momentum in Retail weakened.
- Technology, Health Care, and Consumer Cyclical are in the worst quadrant, with momentum in Consumer Cyclical and Health Care improving.

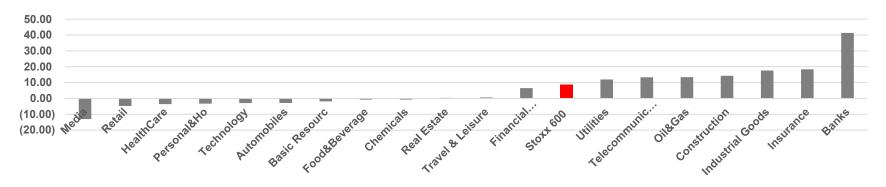

#### Decline amid Extreme Sector Divergence, Banks at Risk

• This decline was amid extreme sector divergence. Banks, measured by the iShares DJ Stoxx Bank Index (EXV1.DE), are up 41% year-to-date, significantly outpacing the Stoxx 600's gain of 8% and pushing value stocks into overextended territory versus growth, as shown by our rolling 12-month value versus growth indicator.

#### 12-month Oscillation MSCI Value (Grey) & MSCI Growth (Red) Vs. The Stoxx 600

#### Year-to-date Sector Price Performance

Source: Bloomberg

• Banks surged 15% between mid-July and mid-August, but the rally was overextended. The recent pullback is more concerning, as it was on high volume and included a decisive break below the 21-DMA. Political developments in France accelerated this decline and, with no quick resolution in sight, the downside risk for banks remains elevated.

#### **EXV1.DE Daily Chart**

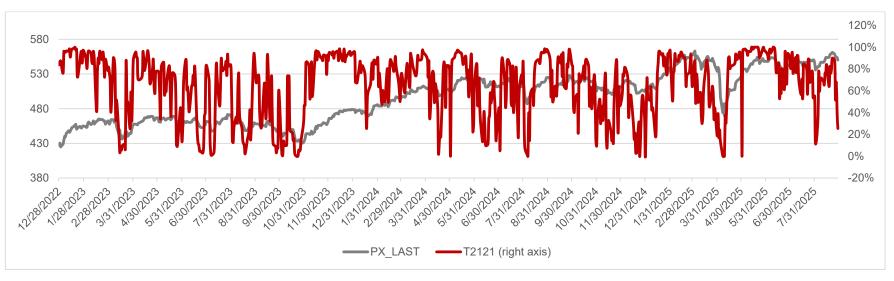

Source: Panaray

• Meanwhile, market breadth has narrowed considerably. The number of breakouts sharply declined over the past two weeks. Our T2121 indicator, which measures the 12-week ratio of new highs to new lows, weakened significantly. These signals point to fragility in the rally.

#### 12 week New High/New Low Ratio

Source: Bloomberg

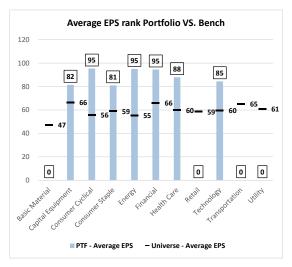

• Against this backdrop, we see the first signs of sector rotation. With banks losing momentum, growth-oriented and defensive sectors, especially Health Care, which has lagged significantly year-to-date, are beginning to show relative strength against the broader market. This suggests that leadership could shift away from value-driven financials toward more resilient growth and defensive areas.

### **EMEA Rotation Chart**

#### **How To Read The Sector Card**

#### **European Focus List**

O'Neil Recommendations

The **European Focus List (EFL)** is a proprietary list of long ideas that fit the fundamental and technical criteria of the O'Neil Methodology.

#### **Top Rated**

Stocks displaying the best Composite rating

The Composite Rating combines the EPS Rank, Relative Strength Rating, Industry Rank. **SMR** Group Rating. Accumulation/Distribution Rating, and the stock's percent off its 52-week high. More weight is placed on EPS Rank and Relative Strength Ratings. The resulting rating of technical and fundamental factors is compared against all other stocks in the trading country and assigned a rating from 1 to 99, with 99 being the best. A rating of 90 means the stock has outperformed 90% of all other stocks.

#### Outperforming

Stocks breaking out from consolidation

We recommend buying stocks at the **breakout level**. A breakout is a price movement of the security through an identified level of resistance (pivot point) after forming a consolidation base. Our proprietary chart patterns are based on over 50 years of our

### **Early Basing**

Stocks trading near pivot

Stock near pivot point (last line of resistance) with improving technical characteristics and above average fundamental profile based on O'Neil proprietary ratings and rankings.

### Laggards

Stocks below 200-DMA + 50-DMA in a downtrend

**Laggards** are stocks showing technical weakness. We believe these stocks are laggards relative to their own domestic markets and, if owned, need to be reviewed carefully as they may be vulnerable to further downside risk and underperformance.

#### **Disclaimer**

#### U.S. FOCUS LIST & GLOBAL FOCUS LISTS DEVELOPED, EMERGING & FRONTIER MARKETS

The U.S. Focus List and Global Focus List for Developed, Emerging, and Frontier Markets seek to identify equity ideas for further research for institutional investors. Investors, before making investment decisions, should review and evaluate additional information, such as a company's SEC filings, business model, industry fundamentals, management team, and products and services.

#### **EXPLANATION OF PERFORMANCE CHARTS FOR U.S. FOCUS LIST & GLOBAL FOCUS LISTS**

William O'Neil + Co. Incorporated is an SEC Registered Investment Adviser. Employees of William O'Neil + Company and its affiliates may now or in the future have positions in securities mentioned in this communication. Our content should not be relied upon as the sole factor in determining whether to buy, sell, or hold a stock. For important information about reports, our business, and legal notices (including our Privacy Policy), please go to williamoneil.com/legal.

Performance results do not represent actual trading, and may not reflect the impact that material economic and market factors might have had on the investment decision-making process if actually managing client money. There is substantial speculative risk in most international stocks. Past performance is not necessarily an indication of future performance. Performance computations for the U.S. Focus List and Global Focus Lists reflect a time weighted rate of return. All holdings are rebalanced to equal dollar amounts daily. Dividends are not considered in computations. Commissions used in calculations are 50 basis points for stocks in the Global Focus List Emerging Markets and 20 basis points for stocks in the Global Focus List Developed Markets. Percent gains and losses are calculated for all issues that remain on the "Buy Recommendations" at the end of the week. For issues that were added to the "Buy Recommendations" intra-week, the basis used to calculate the percent change is the price noted when the issue appeared as a "Buy Recommendation" in both the U.S. Focus List or Global Focus List Confidential Alerts. For issues that were "Removed" intra-week, the selling price used to calculate the percent change is the price noted when the issue appeared as "Removed" in the U.S. Focus List or the Global Focus List Confidential Alerts. The iShares MSCI EAFE Index Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of publicly traded securities in the European, Australasian and Far Eastern markets, as measured by the MSCI EAFE Index.

The iShares MSCI Emerging Markets Index Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of publicly traded securities in emerging markets, as represented by the MSCI Emerging Markets Index.

The benchmark is the S&P 500 Index, which is a market-capitalization weighted index containing the 500 most widely held companies (400 industrial, 20 transportation, 40 utility and 40 financial companies) chosen with respect to market size, liquidity, and industry. The volatility of the S&P 500 Index may be materially different from that of the strategy depicted, and the holdings in the strategy may differ significantly from the securities that comprise the S&P 500 Index. The S&P 500 Index is calculated on a total return basis with dividends reinvested and is not assessed a management fee.

All charts in this presentation are intended to be used as a tool to assist investors in identifying equity ideas worthy of further review. Charts provide certain current and historical information, but are not a substitute for a comprehensive analysis of individual stocks, and should not be relied on as the sole factor in determining whether to buy, sell or hold. Nothing in this communication should be construed as an offer to buy or sell any security.
